A history of computing and computer science. Lectures and practical assignments. Part I. A Textbook. Abakan, 2012. 99 p.

The textbook describes mathematical, technological, and linguistic prerequisites for the formation of computer science. It has practical assignments designed to revise and better memorize theoretical material.

The first part of the textbook focuses on the period beginning from the earliest epoch up to the 1940s.

The textbook is intended for students of computer science and high school students.

Contents

Preface	4
I. Introduction	5
II. Mathematical prerequisites	8
2.1. The development of positional systems of numeration	8
2.2. Systems of numeration	11
2.3. The development of the binary numeral system	14
2.4. Laws of information distribution	18
2.4.1. Bradford's law	18
2.4.2. Zipf's law	20
2.4.3. Hartley-Shannon's law	22
2.5. Assignments	23
III. Technological prerequisites	29
3.1. Blaise Pascal's calculator	29
3.2. Odhner Arithmometer	32
3.3. Hollerith's Tabulating Machine.....	34
3.4. Electrical engineering and creation of computer electronic base	37
3.5. Assignments	40
IV. Linguistic prerequisites	42
4.1. J. M. Jacquard and the idea of programmed control	42
4.2. A. Lovelace and Ch. Babbage's analytical engine	43
4.3. Turing machine	45
4.4. Assignments	48
V. Conclusions	52
References	53
Alphabetic name index	55
Chronologic name index	58
Appendix	59
